

PaperPeace

Press kit · Document app for iPhone, iPad & Mac

PRESS RELEASE · FOR IMMEDIATE RELEASE

A DMS for people, not IT departments: PaperPeace enters public beta

The app puts document management into families' hands for the first time — sorted automatically, private on your own device, with no server and no forced subscription.

Übach-Palenberg, Germany, July 4, 2026 — Every household drowns in paper: medical bills, warranty receipts, contracts with cancellation deadlines, the kids' school forms. Today's tools fail at both ends — photo and scanner apps create no order, while professional document management systems (DMS) demand servers, maintenance and IT know-how. **PaperPeace** now enters public beta to close exactly that gap: a full document archive as simple as a consumer app and as private as your own filing cabinet.

You scan or import a document, and PaperPeace reads the text on the device via OCR and files everything automatically — type, date, sender, recipient and tags. Recognition learns from your corrections, full-text search reaches into the scanned word, and reminders alert you before deadlines such as an expiring warranty or a cancellation window. PaperPeace is a single universal app for iPhone, iPad and Mac.

What matters just as much is what PaperPeace does NOT do: there is no server, no account and no third-party cloud. OCR and recognition run entirely on the device; documents are never sent to the vendor. Users choose where their data lives — locally, in iCloud Drive or in their own cloud (Dropbox, Google Drive, OneDrive). Everything stays in open formats: documents as ordinary PDFs, metadata as readable Markdown files. No vendor lock-in.

Three key messages

- **An open niche:** DMS were built for companies. PaperPeace makes them usable for families for the first time — simple, with no administration and no server.
- **Privacy by default:** Sensitive health, child and financial documents stay on the device. On-device recognition instead of a vendor cloud, GDPR-compliant, developed in Germany.
- **No lock-in, no forced subscription:** Data as ordinary PDFs plus readable Markdown, stored locally or in your own cloud — the sovereignty of your own server, without the server.

Availability & pricing

PaperPeace is available now as a public beta via Apple's TestFlight; sign-up runs through paperpeace.app. PaperPeace is free to use; those who want more can later choose an optional Pro subscription or a one-time Lifetime purchase. There is no forced subscription, no advertising and no hidden costs.

Founder quote

"Every family has the same problem a company does — they lose track of their

documents. But nobody wants to run a server for it or upload their health records to someone else's cloud. PaperPeace is built for exactly those people."

— Timo Beyel, founder & developer of PaperPeace

About PaperPeace

PaperPeace is a document app for iPhone, iPad and Mac that helps individuals and families tame their paperwork — with no server, no forced subscription and no third-party cloud. Documents are recognised, sorted and made searchable directly on the device; the on-device recognition learns from corrections, and all data stays in user-controlled storage. PaperPeace is GDPR-compliant and developed in Germany.

FACT SHEET

PaperPeace at a glance

Product	PaperPeace — document archive / DMS for individuals and families
Platforms	A single universal app for iPhone (iOS), iPad (iPadOS) and Mac (macOS)
Brand promise	Peace in the paper chaos — simple, private, in control
Recognition	Learning on-device ML model (weighted keywords, Naive-Bayes principle): detects type, date, sender/recipient, person and tags automatically; learns from corrections. OCR via Apple's on-device text recognition.
Finding	Full-text search into the scanned word, quick filters by type/tag/correspondent/date, Spotlight & Siri
In control	Inbox, status & follow-up reminders, archive serial numbers (ASN), tags, notes, sharing & PDF export
System integration	Camera scanning, share extension, folder monitoring, Shortcuts, widgets, Lock Screen & Control Center
Data storage	Local, iCloud Drive or your own cloud (Dropbox, Google Drive, OneDrive). Open formats: PDF + readable Markdown sidecars. No account, no server.
Privacy	On-device processing, no tracking, GDPR-compliant, made in Germany (self-declared)
Pricing	Free to use; optional Pro (subscription) and Lifetime (one-time purchase). No forced subscription, no ads, no hidden costs.
Availability	Public beta via TestFlight; sign-up at paperpeace.app
Languages	German and English
Developer	Timo Beyel, Übach-Palenberg, Germany
Web	paperpeace.app

About the founder

PaperPeace is developed by Timo Beyel in Übach-Palenberg, Germany, as a small, independent project. Beyel has designed and built consumer applications for more than 20 years and created PaperPeace in his spare time — out of his own family life, where neither a self-hosted server nor yet another third-party cloud was an option. The guiding idea is document management that ordinary people can use without IT skills, and without giving up privacy or control over their own data.
